

GXL SERIES

Micro-size Inductive Proximity Sensor

High Performance
in Micro-size Design

CE Marked
Conforming to EMC Directive

Wide Model Variety

Models ranging from extremely compact type to long sensing range type are available to suit various applications.

Versatile Mounting

Since the sensor is fingertip size, it can be mounted in a tight space.

Reduced Wiring Operation

The wiring cost of the DC 2-wire type is 2/3 that of a conventional model. Besides, the possibility of miswiring is reduced.

Particularly convenient when many sensors are used.

Wiring of the 3-wire type is cumbersome.

Wiring of the 2-wire type is simple and neat.

Inflection Resistant Cable Type

The inflection resistance of its cable is ten times that of the conventional model. The sensor can be mounted on a moving table or a robot arm.

※ Except PNP output type and 5m cable attached NPN output type

APPLICATIONS

Detecting wafer frame

Detecting aluminum pallet

Code reading

	MS-GXL15	Mounting bracket for GXL-15 type
	MS-GXL15-2	Mounting bracket for GXL-15F type

Connector

- CN-13

- CN-13-C1
- CN-13-C3

Sensor mounting bracket

- MS-GXL8-3

- MS-GXL12-2

Mounting position can be adjusted. It is rust-free, being stainless steel.

A set of one pan head screw and two screws with washers is attached.

Screws are not supplied.

- MS-GXL15

- MS-GXL15-2

Screws are not supplied.

GXL-8 type

Sensing field (common)

Correlation between sensing object size and sensing range (DC 2-wire type)

Correlation between sensing object size and sensing range (NPN output type)

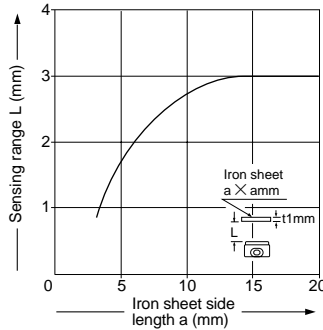

As the sensing object size becomes smaller than the standard size (iron sheet 15 x 15 x 1mm), the sensing range shortens as shown in the left figures.

PRECAUTIONS FOR PROPER USE

Refer to P.836~ for general precautions.

All models

This product is not a safety sensor. Its use is not intended or designed to protect life and prevent body injury or property damage from dangerous parts of machinery. It is a normal object detection sensor.

Mounting

GXL-8 (DC 2-wire) type

The tightening torque should be 0.5N·m or less.

To mount the sensor with a nut, the thru-hole diameter should be $\phi 3.4$ mm. With the attached mounting screw and nut, take care that the thickness of the mounting plate should be 2.3mm or less.

If a screw other than the attached screw is used, make sure to use a M3 truss head screw. (Do not use a flat head screw) or a pan head screw.

GXL-8 (NPN output) type

The tightening torque should be 0.5N·m or less.

To mount the sensor with a nut, the thru-hole diameter should be $\phi 3$ mm. With the attached mounting screw and nut, take care that the thickness of the mounting plate should be 2.3mm or less.

If a screw other than the attached screw is used, make sure to use a M2.6 truss head screw.
Note: Do not use a M3 screw.

GXL-N12 type

<One point fixing>

<Two point fixing>

The tightening torque should be 0.49N·m or less.
To mount the sensor with a nut, the thru-hole diameter should be $\phi 3.4$ mm.

GXL-15 type

The tightening torque should be 1N·m or less.

To mount the sensor with the optional sensor mounting bracket **MS-GXL15**, the thru-hole diameter should be $\phi 3.4$ mm.

Screw, nut or washers are not supplied. Please arrange them separately.

To mount the long sensing range **GXL-15** type on a magnetic body, such as iron, the enclosed aluminum sheet, or any other aluminum sheet having a minimum size of $30 \times 39.5 \times t0.3$ mm (**GXL-15HLU**□/ **GXL-15HL**□: $30 \times 30 \times t0.3$ mm), should be inserted between the sensor and the magnetic body.

However, it is not necessary to use the aluminum sheet when mounting on a non-magnetic body, such as, aluminum or an insulator.

When mounting the inductive proximity sensor with the optional sensor mounting bracket **MS-GXL15-2**, if the bracket is mounted close to the sensing part, the bracket itself gets sensed and the operation becomes unstable. Make sure to mount such that the mounting holes of the sensor and those of the mounting bracket are in one horizontal straight line.

Influence of surrounding metal

When there is a metal near the sensor, keep the minimum separation distance specified below.

Front sensing type

	GXL-8F type	GXL-N12F type	GXL-15FU/GXL-15F type	GXL-15FLU type
A	7mm	7mm	8mm	8mm (Note)
B	8mm	20mm	20mm	30mm
C	3mm	10mm	7mm	10mm

Note: The **GXL-15FLU** type should be mounted on an insulator or a non-magnetic body. To mount it on a magnetic body, such as iron, use the enclosed aluminum sheet.

Top sensing type

	GXL-8H type	GXL-15HU/GXL-15H type	GXL-15HLU/GXL-15HL type
D	4mm	6mm	12mm
E	10mm	20mm	30mm
F	3mm	0mm	10mm (Note)
G	3mm	3mm	10mm

Note: When **GXL-15HLU/GXL-15HL** type is mounted on an insulator or a non-magnetic body, or seated on the enclosed aluminum sheet, the distance 'F' can be zero.

PRECAUTIONS FOR PROPER USE

Refer to P.836~ for general precautions.

Notes: 1) 'I' in the model No. specifies the different frequency type.
 2) Close mounting is possible for up to two sensors.
 When mounting three sensors or more, at an equal spacing, in a row, the minimum value of dimension H should be as given below.
GXL-8 type: 2mm, **GXL-N12** type: 4mm
GXL-15 (Standard type): 7.5mm (**GXL-15H** type: 12.5mm)
GXL-15 (Long sensing range) type: 30mm (**GXL-15HL** type: 32.5mm)

Sensing range

- The sensing range is specified for the standard sensing object. With a non-ferrous metal, the sensing range is obtained by multiplying with the correction coefficient specified below. Further, the sensing range also changes if the sensing object is plated.

Others

- Do not use during the initial transient time (50ms) after the power supply is switched on.
- The output is not incorporated with a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load (excluding the DC 2-wire type).

GXL-N12FT type

Soldering

- To solder the terminals of the sensor, observe the following conditions.

Soldering temperature: 260°C or less
 Soldering time : 5 sec. or less
 Soldering position : 1.5mm, or more, away from the sensor body.

DC 2-wire type

Wiring

- The sensor must be connected to a power supply via a load. If the sensor is connected to a power supply without a load, the short-circuit protection makes the sensor inoperable. (The output stays in the OFF state and the indicator does not light up.) In this case, rectify by connecting the power supply via a load. Now, the sensor becomes operable. Further, take care that if the power supply is connected with reverse polarity without a load, the sensor will get damaged.

- For series connection (AND circuit) or parallel connection (OR circuit) of sensors, take care of the following.

Series connection (AND circuit)

Parallel connection (OR circuit)

Note: The output is generated normally even if the indicator does not light up properly.

- The residual voltage of the sensor is 3V. Before connecting a relay at the load, take care of its actuation voltage. (Some 12V relays may not be usable.)

2-color indicator (Normally open type only)

- When the sensing object is in the stable sensing range, the LED lights up in green, and when the sensing object is in the unstable sensing range, the LED lights up in red. While the LED lights up in green, the sensing is performed stably without being affected by temperature drifts or voltage fluctuations.
